

# StormForge Optimize Live

## Continuous, Autonomous Rightsizing for Kubernetes Workloads

Double your Kubernetes resource utilization and unburden your devs from sizing complexity with the industry's first autonomous, tunable, vertical pod autoscaling that works seamlessly with K8s HPA at enterprise scale.

### CHALLENGE

We typically see Kubernetes pod resources are over-provisioned by an average 70%, wasting thousands if not millions of dollars. Teams struggle to make changes to resources without risking reliability of the applications and sometimes they just don't have the time.

### SOLUTION

#### What is Optimize Live?

Optimize Live is an HPA-compatible Kubernetes vertical pod auto-scaling solution. It uses cluster-based agents and machine learning to continuously calculate and automatically apply optimum combinations of resource requests, limits, and HPA target utilization across thousands of workloads.

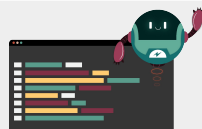

#### What does Optimize Live do?

To solve this challenge, Optimize Live rightsizes workloads automatically on an hourly, daily, or weekly basis to continuously ensure workloads are using the right amount of resources. Optimize Live does this with zero configuration on the users part so that it's not yet another tool you need to learn or think about.

#### MAXIMIZE Your Efficiency

and minimize reliability risk with bi-directional pod autoscaling

#### FREE Your Devs

and K8s experts from sizing toil with flexible automation

#### ACCELERATE Your Savings

with plug-and-play installation and enterprise-scale optimization

Start your 30-day Trial of Optimize Live today.
